

Access Daily and Real-Time Domain Intel with the Most Complete and Up-to-Date Coverage

Effectively monitoring new domain events requires high technical expertise and continued access to multiple sources.

In today's digital world, both legitimate and nefarious activities typically involve registering new domain names. However, the enormous daily volume of domain events makes collecting and processing this information time-consuming and demands continuous access to various data sources, among other technical complexities. Avoiding the limitations and possible security dangers of getting delayed intelligence calls for a daily newly registered domain (NRD) data feed with market-leading coverage.

Tap into the most complete, enriched daily lists of new domain data.

Our NRD data feed provides access to daily files containing, on average, 250,000 newly added domains, 363,000 newly dropped domains, 532,000 updated domains, and 55,000 newly discovered domains. Each daily raw data file is supplemented with a statistics file that gives you a TLD-level view of a given day's registration activities. We provide the NRD data in CSV and JSON formats accessible through flexible data plans, with options to include the NRDs' complete WHOIS information. [Download a file sample](#) or [contact us](#) for more information.

What Our Clients Say

“ We chose WhoisXML API's domain intelligence because of the prompt discovery of new domains to help us keep up with the fast-paced registration of suspicious websites. ”

— Senior Platform Engineer at a
Cybersecurity Company

“ The WHOIS enrichment applied to the data feeds, which we can easily integrate into our systems because of their consistent format, gave us a deeper view of the who behind domain activities. ”

— Security Analyst at a
Fortune 500 Company

Practical Usage

Access daily lists of new domain data for:

- **Integration into cybersecurity solutions:** Expand the capabilities of your security solutions with accurate tracking of new domain events.
- **More robust network security:** Add insights from our NRD data feeds to firewalls and other network security solutions.
- **Stricter zero-trust policy implementation:** Impose stringent blocking measures to protect networks and systems from NRDs that serve as threat vectors.
- **Security research and OSINT analysis enrichment:** Use our domain intelligence to map out the domain connections of known threats and threat actors.

What Data Points Are Included?

Data Points	Description
Domain name	Domain detected by the service
Reason	Domain has just been added, dropped, updated, or discovered
Relevant dates	Creation, expiration, update, and audit dates applicable to the domain
Name and WHOIS servers	Name and WHOIS server/s hosting the domain
Registrar information	Name and ID of the domain registrar
Registrant information	Name, address, and contact details of the entity that registered the domain
Domain status	Status of the domain assigned by its registrar or registry
Administrative, billing, and technical contact details	Name, address, and contact details of the person in charge of the domain's billing, technical, and administrative aspects

What Domain Intelligence Delivery Models Do You Provide?

Delivery Model	Update Frequency
Newly Registered Domains Data Feeds	Daily
Real-Time Domain Registration Streaming	Real time

About Us

WhoisXML API aggregates and delivers comprehensive domain, IP, DNS, and subdomain data repositories. We have more than 52,000 satisfied customers from various sectors and industries, such as cybersecurity, marketing, law enforcement, e-commerce, financial services, and more. Visit whoisxmlapi.com or contact us at sales@whoisxmlapi.com for more information about our products and capabilities.
