

Comprehensive and Accurate IP Netblocks Coverage

Digging deeper into Internet ownership requires access to exhaustive IP netblock information with relevant data points.

Legal agreements with regional Internet registries (RIRs) and Internet service providers (ISPs) are just some hurdles to gathering your own IP netblock data. Other significant challenges include the grueling data parsing process and technical aspect of navigating through multiple data sources. By partnering with a reliable IP intelligence provider, businesses can take away the pain of DIY IP netblock data aggregation.

Gain in-depth insights into IP ownership and administration. Get access to extensive and relevant IP netblock data.

Our IP netblock intelligence covers 28+ million unique IP ranges belonging to 13.1+ million IP netblocks. Our products' scope includes 99.5% of active IP addresses spanning 230,000+ locations, 215,000+ ISPs, and 65,000+ unique Autonomous System numbers (ASNs). We partner with the world's largest RIRs, ISPs, and other data aggregators, allowing us to provide real-time updates—specifically 48,000+ IP ranges and 45+ million IP records daily. Our IP netblock data is available in normalized and well-parsed data formats accessible through real-time APIs and downloadable data feeds. We offer flexible data access plans with exclusive licensing options for data redistribution. Download our [IP netblock data samples](#) or [contact us](#) for more information.

Practical Usage

Get the IP intelligence you need to:

- Obtain IP network intelligence that covers ASN, IP-to-company ownership and contact information
- Detect IP abuse and associations with known bad IP ranges
- Identify IP ranges connected to sanctioned or restricted locations, as defined by government agencies such as OFAC

13.1 million+
IP Netblocks

28 million+
Unique IP ranges

48,000+
IP ranges updated daily

99.5%
IP addresses in use tracked

45 million+
IP records updated daily

65,000+
Unique ASNs

What Data Points Are Included?

Our IP netblock intelligence contains all relevant data points related to IP netblock registrations, ASNs, and more. See the table below for an overview of the data points in our records.

Data Points	Description
IP range	IP range and the integer value of the first and last IP addresses in the range
AS details	ASN, name, type, route, and domain
IP-to-company data	ID, name, location, and contact details of the organization that registered the IP range
Contact information	ID, name, email address, phone number, and location of the IP block's abuse contact, administrator, technical contact, and maintainer
Other key data points	Date the IP netblock was last modified, modification type (added, dropped, or changed), range source, remarks associated with the IP block, and parent or data source for BGP-enriched files

What IP Netblocks Data Delivery Models Do You Provide?

Delivery Model	Update Frequency
IP Netblocks Database <ul style="list-style-type: none">All data feed filesBGP enriched dataRegulatory-specific data (inc. OFAC)	Daily
IP Netblocks API	Daily
IP Netblocks Lookup	Daily

About Us

WhoisXML API aggregates and delivers comprehensive domain, IP, DNS, and subdomain data repositories. WhoisXML API has more than 52,000 satisfied customers from various sectors and industries, such as cybersecurity, marketing, law enforcement, e-commerce, financial services, and more. Visit whoisxmlapi.com or contact us at sales@whoisxmlapi.com for more information about our products and capabilities.
